

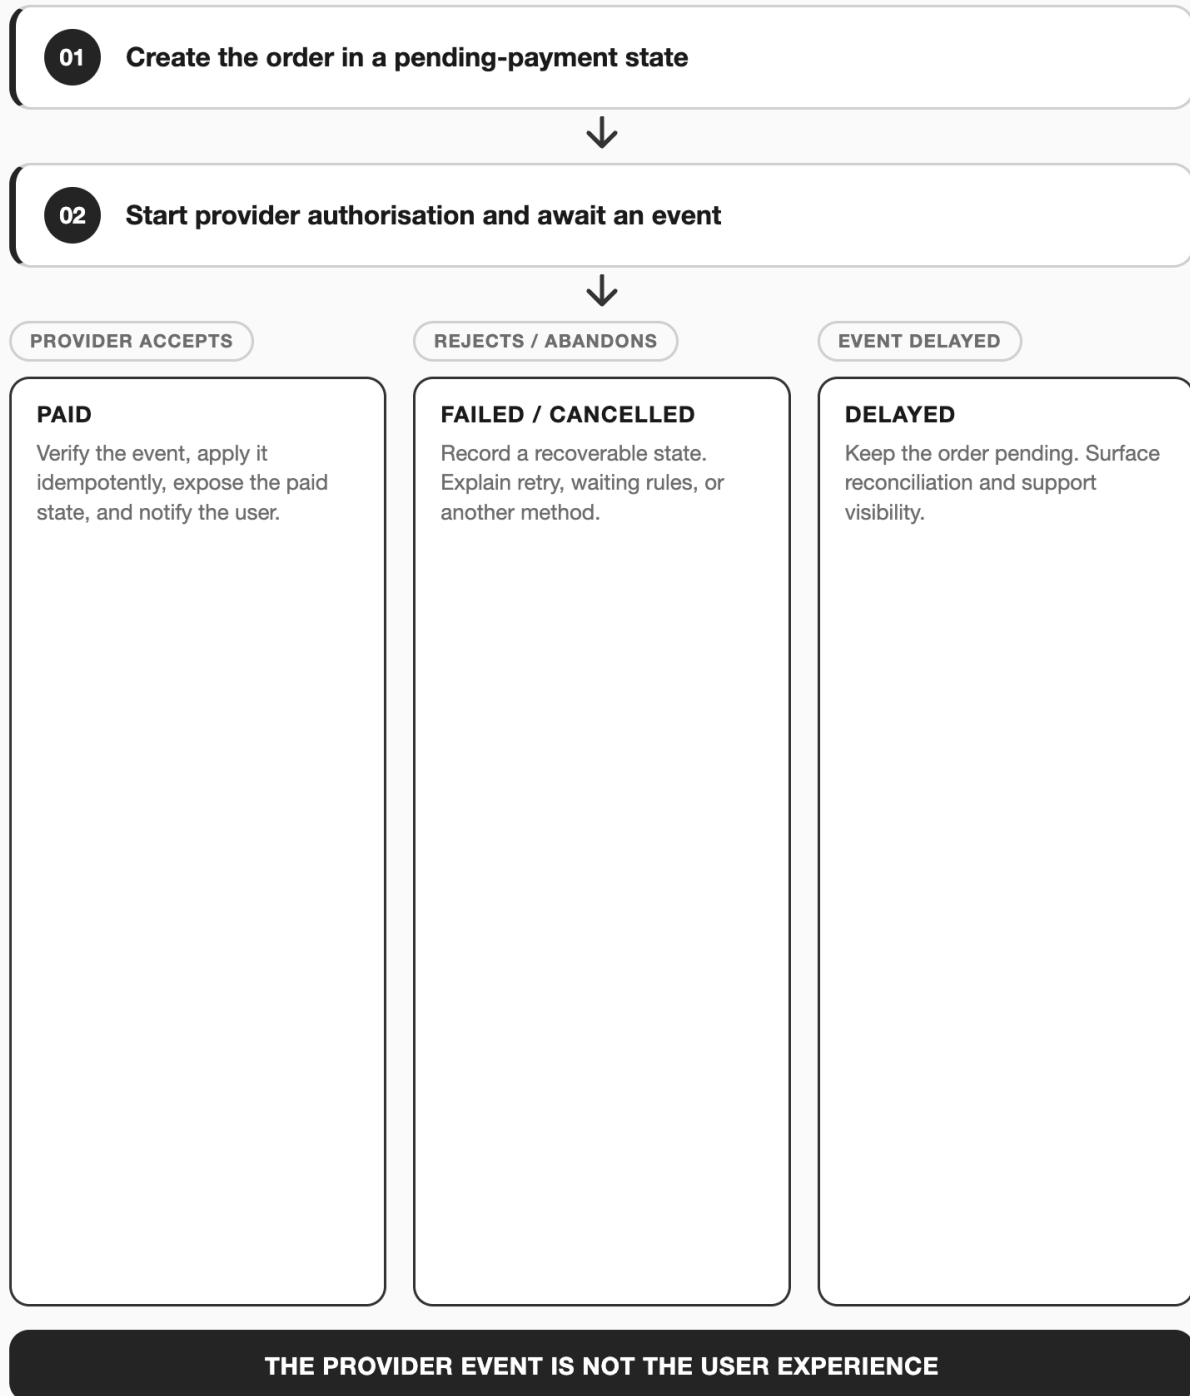

Figure 8.2. E-wallet flow with happy, error, and recovery states

FIGURE 8.2

The e-wallet outcome map

A payment requirement is incomplete until paid, failed, cancelled, and delayed states have product behaviour.

UI, order state, notification, operations, and support must agree on the same outcome.

F8.2

The e-wallet flow makes pending, failed, duplicate-safe, and support-visible behavior part of the requirement rather than late implementation detail.
