

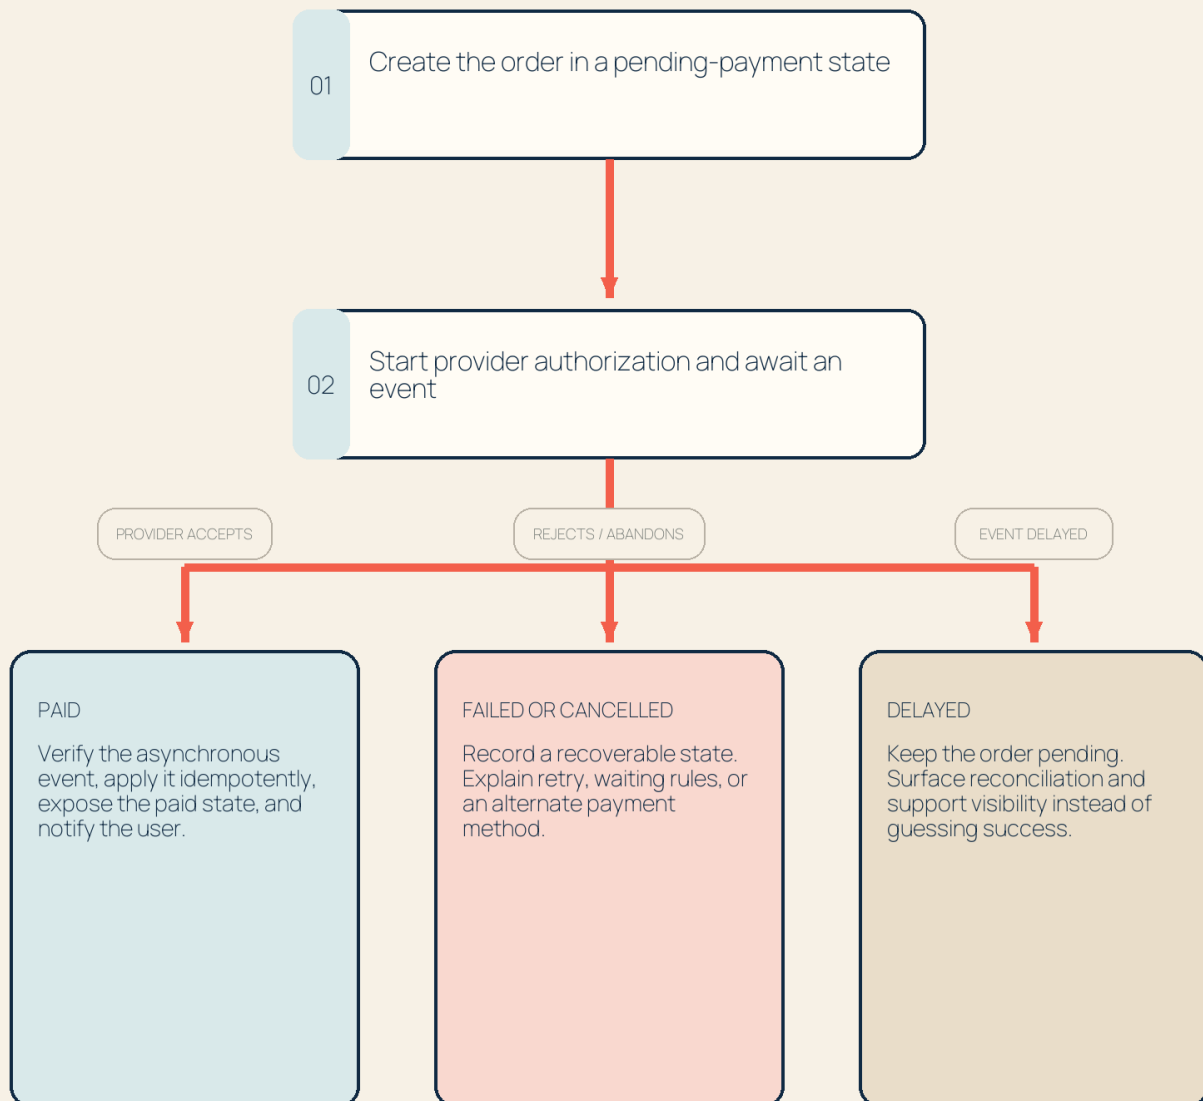

Figure 8.2. E-wallet flow with happy, error, and recovery states

THE E-WALLET OUTCOME MAP

A payment requirement is incomplete until paid, failed, cancelled, and delayed states have product behavior.

THE PROVIDER EVENT IS NOT THE USER EXPERIENCE

UI, order state, notification, operations, and support must agree on the same outcome.

F8.2

The e-wallet flow makes pending, failed, duplicate-safe, and support-visible behavior part of the requirement rather than late implementation detail.
